

What is claimed is:

1. An image reproducing method comprising the steps of:

obtaining digital image data recorded by a digital camera  
to which recording information representing a recording  
condition is added by the digital camera having a function of  
adding the recording information to the digital image data  
recorded thereby,

storing, in a predetermined storage medium, the digital  
image data to which the recording information has been added;

carrying out image processing for enhancing a picture  
quality of the digital image data having been stored in the  
storage medium by using the recording information having been  
added to the digital image data; and

reproducing the digital image data on which the image  
processing has been carried out.

2. A image reproducing method as defined in Claim 1  
comprising the steps of:

storing the digital image data in the storage medium after  
adding a variety of conditions of the image processing to the  
digital image data on which the image processing has been  
carried out;

carrying out the image processing on the digital image  
data which have been stored in the storage medium for enhancing  
the picture quality of the digital image data using the  
processing conditions having been added to the digital image  
data, and

reproducing the digital image data on which the image processing has been carried out.

3. An image reproducing apparatus used for implementing the method as defined in Claim 1, comprising:

5 image processing means for carrying out the image processing for enhancing the picture quality of the digital image data using the recording information added to the digital image data, and

10 reproducing means for reproducing the digital image data having been processed by the image processing means.

4. An image reproducing apparatus used for implementing the method as defined in Claim 2, comprising:

15 image processing means for carrying out the image processing for enhancing the picture quality of the digital image data using the image processing conditions added to the digital image data, and

reproducing means for reproducing the digital image data having been processed by the image processing means.

20 5. A digital camera used for implementing the method as defined in Claim 1 or 2, comprising recording information adding means for adding the recording information to the digital image data.
